PORTWEST®

Charles Hughes, son of a small farmer on the wild Atlantic coast, was determined to have the best workwear and footwear when he founded his business in 1904. Over 100 years later his core principles of exceptional design, quality, value and service still apply today.

EST **1904**

PORTWEST ONLY SELL TO RESELLERS

Portwest only sell to safety and industrial distributors and national retailers. Customers can be assured that they will never have to compete directly with Portwest in their own market place.

SAME DAY DISPATCH

All orders received via the Portwest website are processed within 45 minutes. Orders received via fax, phone or email are dispatched on the same day.

FULL INTERNATIONAL TESTING AND CERTIFICATION

We take safety seriously. All our products are tested to the highest international standards. Certificates can be downloaded from our website.

MANUFACTURING

We operate four ultra-modern factories in Bangladesh (X2), Myanmar and Ethiopia, giving us exceptional quality, fast lead times and ethical sourcing. Our factories are Worldwide Responsible Accredited Programme (WRAP) certified.

VERY BIG & VERY SMALL SIZES AVAILABLE

A comprehensive range of very small to very big sizes on our best-selling garment and footwear styles.

CUSTOMER SERVICE

24/7/365

Portwest's B2B website allows customers to check stock, place orders and receive order confirmations within minutes.

PACKING QUANTITIES

1. This indicates how many products are packed per box and carton. All of our products are sold one size and one colour per carton.

2. Unit of Sales (UOS)

This is the minimum order quantity of a product. Unless indicated otherwise the UOS is normally one piece or one pair.

3. Where pack symbols are coloured orange the UOS is greater than 1.

Example 1
10 = Inner Box

200
10

Example 1
UOS=1

In this case the UOS = 1 piece

200 = Total Outer Carton Quantity

Example 2
100 = Inner Box

3000
500
100

Example 2
UOS=3000

In this case the outer carton quantity is the UOS and is colour coded orange to show this. Ordering 1 unit = 3000 pieces when the order is placed.

500 = Mid Pack

3000 = Total Outer Carton Quantity

Example 3
10 = Inner Box

X30
10

Example 3
UOS=10

x30 = Total Outer Carton Quantity (300)

In this case the inner box is the UOS and is coloured orange to show this.

Example 4
50 = Inner Box

x6
x10
50

Example 4
UOS=50

x10 = The Number of Inner Boxes Per Mid Pack

x6 = The Number of Mid Packs Per Carton

Inner Boxes Per Carton (10x6 = 60)

Number of Individual Pieces Per Carton (50x10x6 = 3000)

In this case the inner box is the UOS and is coloured orange to show this.

Examples of units of sale (UOS)

1

1 = Singles
1 = Singles = Garments, specialist gloves sold in singles

2

2 = Pair
2 = Pair = Footwear, most gloves

B = Inner Box
B = Inner box = Disposable gloves

100%

C = Outer Carton
C = Carton = Biztex, Disposables gloves,

INNOVATION IS IN OUR DNA

Whether through new product launches or improved service, Portwest is always innovating. With contemporary designs in every range, customers can be assured that Portwest will offer them the latest trends and technologies.

Our award-winning design team have been busy researching the latest trends, cutting edge fabrics and smart components to deliver revolutionary new designs.

STRETCHING THE LIMITS

Stretching the limits of comfort, safety and performance, Portwest's innovative and premium stretch fabrics provide unparalleled ease of movement and supreme flexibility. The unique blend of materials offers both high performance and exceptional all-day comfort. Technically superior with high levels of breathability and excellent abrasion and tear resistance, **Portwest's range of stretch fabrics have it all.**

CUSTOM MADE TO ORDER

Portwest create customised products for thousands of customers throughout Australia and New Zealand each year.

The Technical Design Team work closely with customers to design individual products or full ranges. They work with independent notified bodies enabling certification to all international standards. Portwest has different service and customisation options to choose from.

Redesign or alter an existing portwest product to suit your needs.

MADE TO ORDER:

YOUR IDEA YOUR PRODUCT

Complete design service starting with your own specifications.

CUSTOM EXPRESS

OR

CUSTOM SPECIAL

Custom Express is a fast, efficient service using stock fabrics and colours to guarantee industry leading production times.

Use our fully bespoke Custom Special service using customised fabrics and colours that are made to order.

INDUSTRY LEADING PRODUCTION TIMES

Offering a fast and efficient personalised service.

EMBROIDERY AND SCREEN PRINTING SERVICE

Our fast and efficient branding service is a one-stop-shop for all your workwear needs.

Using in-house embroidery machines, your workwear will be branded and delivered in one simple process. Available in a large range of colours, our team of professionals will recommend the closest matches to your artwork. This service is fast, efficient and will save you time and money.

BRANDING SERVICES

Embroidery and screen printing can be applied to any workwear product to make your product stand out from the crowd. Using the latest Barudan embroidery machines, our in-house design team will produce the best quality branding for your work clothing.

OVER 100 YEARS' EXPERIENCE IN EVERY STITCH

SUN PROTECTION WORKWEAR

**BE SAFE IN THE
SUN WITH OUR
EXTENSIVE RANGE
OF UPF PROTECTIVE
GARMENTS**

TOP TIPS FOR STAYING SAFE WHEN WORKING IN THE SUN

Harmful effects of the sun can seriously compromise workers' health. Heat related fatigue and illness cost employers time and money, as well as having an ill-effect on individuals' health.

90% of skin cancers can be prevented if exposure to harmful sun rays is controlled

Our creative team has developed innovative garments that offer up to 50+ UPF ratings and are designed to keep workers safe, cool and comfortable.

Know your UPF ratings because smart workwear selection can minimise the risk of heat related illness such as heat exhaustion.

UPF CLASSIFICATION SYSTEM

| RATED UPF | UPF CLASSIFICATION |
|-----------|----------------------|
| 15 | MINIMUM PROTECTION |
| 30 | GOOD PROTECTION |
| 50, 50+ | EXCELLENT PROTECTION |

INNOVATIVE TECHNOLOGIES

FABRIC FINISHES

Innovative fabric finishes used to enhance garment performance.

SPLASH, OIL + STAIN

- ✓ Helps protect fabric from oil and grease
- ✓ Drives away dirt and grime
- ✓ Enhanced water resistance
- ✓ Aids the release of stubborn stains when washing
- ✓ Helps retain fabric softness

WATER RESISTANT

- ✓ Extreme water resistance
- ✓ Water beads away from the fabric surface
- ✓ Repels dirt and helps prevent stains
- ✓ Allows for garment breathability
- ✓ Enhanced stain removal

DRYING + WICKING

- ✓ Wicks moisture away from the skin
- ✓ Keeps fabric fresh and comfortable
- ✓ Retains fabric brightness
- ✓ Powerful protection from stains
- ✓ Enhanced garment breathability
- ✓ Blocks bad odours

RETRO-REFLECTIVE TAPE

Innovative retro-reflective tape for ultimate visibility in low light conditions.

HiVisTex™

HiVisTex is the latest innovation in reflective tape material that surpasses all international standards including AS/NZS 1906.4, EN ISO 20471 and ANSI/ISEA 107.

HiVisTex tape is constructed from thousands of premium, wide angle, glass beads, placed per centimetre squared. These beads work like thousands of tiny mirrors, reflecting light back towards its source as a brilliant white glow. Perfect for use in the protective clothing industries HiVisTex tape ensures the wearer ultimate visibility in low light conditions.

PROTECTIVE WEAR

Portwest offers powerful protection against multiple hazards and industries. We are your one stop shop for head to toe safety solutions.

PRIME MOVER®

With over 30 styles to choose from, Prime Mover offers you the most hardworking shirt range in the market. All Prime Mover safety and non-safety shirts are designed to offer a stylish and comfortable fit, alongside maximum protection and increased performance.

100% Cotton Drill fabric is available in two weights 260g and 300g. This fabric is fully pre shrunk and has excellent dye retention properties. The long staple fibres used in the construction process provide strength, pilling resistance and a quality finish. This fabric has a UPF rating of 50+ so will block 98% of the UV rays which fall on the garment.

Kingsmill™ Cotton Stretch is a premium cotton stretch fabric. This twill weave blend of 98% cotton and 2% elastane provides the ultimate in comfort and flexibility. The high cotton content gives an ultra soft handle, and the added elastane delivers ease of movement. This fabric has a UPF rating of 50+ to block 98% of UV rays.

PORTWEST's extensive range of high visibility clothing is designed and constructed to ensure compliance with relevant safety standards. Innovative and technical, this high visibility range is ideal for those who will not compromise on style, comfort or performance.

300D
OXFORD
WEAVE

OXFORD WEAVE 100% polyester yarn, is a tough fabric for tough conditions. The fabric has superb abrasion and tear resistance. The polyurethane (PU) coating on the inside makes the fabric durable and waterproof and the outer has a water and stain repellent coating which helps keep the garment clean.

150D
OXFORD
WEAVE

190T
PLAIN
WEAVE

Made with 190T plain weave 100% polyester yarn this is a durable, hard wearing fabric for tough conditions. This fabric is lightweight and has superb abrasion and tear resistance. It has a PVC coating inside which makes the fabric waterproof and has a water and stain repellent coating on the outside which helps keep the garment clean.

100%
COTTON
DRILL

This premium cotton fabric is constructed using special long staple fibres which create a soft but strong material. Moisture is absorbed quickly which allows the wearer to feel cooler, drier and more comfortable.

MICRO MESH

The Micro Mesh bird eye high visibility fabric is constructed to keep wearers cool, comfortable and visible in even the warmest environments. Providing the wearer with a range of UPF protection, the fabric has advanced cooling properties which combined with its breathability make it the ideal choice for warmer climates. Durable, wrinkle resistant with a quick dry quality finish, this fabric will stay strong wash after wash.

**COTTON
COMFORT**

Cotton Comfort is constructed from a blend of 53% cotton/47% polyester. With the cotton on the inside for comfort and the polyester on the outside for maximum durability, this is a robust fabric that provides ultimate comfort. Certified to AS/NZS 1906.4.

VESTPORT

Vestport™ fabric is constructed from 100% polyester warp knitted fabric. This fabric is lightweight, comfortable and highly breathable. Certified to EN ISO 20471 and AS/NZS 1906.4

AUSTRALIAN & NEW ZEALAND STANDARDS

High Visibility Workwear Meets Relevant Australian and New Zealand Standards, AS 4602.1 for High Visibility Safety Garments

The AS 4602.1 Standard specifies the visual requirements for high visibility safety garments for occupational wear by people who may be exposed to the hazard of moving traffic, moving plant or equipment in high risk situations. The standard covers garments suitable for daytime wear, night-time wear where they will be seen by retroreflected light or for wear under both conditions but excludes garments for use by fire services.

The garments specified in this Standard are classified as follows:

Class D A garment designed for daytime use.

Class N A garment designed for night use using retro reflected light.

Class D/N A garment designed for day and night use.

Australian/New Zealand Standard AS/NZS 1906.4 Retroreflective Materials and Devices for Road Traffic Control Purposes

This Standard specifies the requirements for high visibility materials and reflective tape to be used on industrial safety garments for outdoor daytime use and for use at night or in other dark conditions where the wearer needs to be highly visible.

High-visibility materials are classified according to their day or night-time application, as follows:

Class F: High daytime visibility fluorescent material. Class F (W) – includes Wet Weather testing.

Class R: Retroreflective material for use on garments used in dark conditions.

Class RF: Combined performance retroreflective/fluorescent material meeting all of the requirements of Class R - and the daytime colour of Class F.

Class NF: High daytime visibility non-fluorescent material.

Temporary Traffic Management Control (TTMC-W)

The New Zealand Transport Agency (NZTA) has a Code of Practice which specifies the standard of safety garment that a worker must wear while working in or close to hazardous traffic areas.

Victoria Roads: VicRoads Style

This catalogue has a range of garments suitable for working on Victoria Roads marked Vic Roads Style.

Queensland Traffic Controller – Transport and Main Roads: QLD

TMR Style – This catalogue has a range of garments suitable for Queensland Traffic Management marked QLD TMR Style.

The AS 7471 Australian Rail Standard

This Standard outlines the minimum requirements for personal protection equipment including High visibility outer clothing when undertaking work in the rail corridor. The Standard aims to establish standardisation of PPE within the Australian rail industry.

New South Wales Rail Standard: NSW Rail Compliant - Styles with this marking are compliant to the New South Wales Rail standard

AS/NZS 1957

Outlines the care instructions required to ensure correct care of the garment.

AS 4399 Sun Protection Clothing Classification

UPF (Ultraviolet Protection Factor) is the classification system used for sun protective clothing. All fabrics are independently tested according to the AS 4399 standard.

The UPF rating applies only to the area of skin covered. Protection may be reduced if the material is wet, stretched or from the effects of normal wear or exposure to chemicals. For best sun protection use hats, clothing that provides maximum skin coverage, sunglasses, sunscreen and shade.

Sun protective clothing is categorized according to its rated UPF as given in table below.

| Rated UPF | UPF classification |
|-----------|----------------------|
| 15 | Minimum Protection |
| 30 | Good Protection |
| 50, 50+ | Excellent Protection |

EUROPEAN STANDARDS

EN ISO 20471 - High Visibility Clothing - Test Methods And Requirements

This International Standard specifies requirements for high visibility clothing, which is capable of visually signalling the user's presence. The high visibility clothing is intended to provide conspicuity of the wearer in any light condition when viewed by the operators of vehicles or other mechanised equipment during daylight conditions and under illumination of headlights in the dark.

High Visibility clothing has a fluorescent surface, combined with reflective material that meets certification requirements in 3 different classes:

Class 3: Highest Level

Highest level of protection - required for any persons working on or near motorways or dual-carriage ways or airports. Must incorporate a minimum of 0.80m² of background material and 0.20m² of retro-reflective materials. (4 metres of 5cm wide reflective tape)

Class 2: Intermediate Level

Required for any persons working on or near A and B class roads, also for delivery drivers. Must incorporate a minimum of 0.50m² of background material and 0.13m² of retro-reflective material. (2.60 metres of 5cm wide reflective tape)

Class 1: Minimum Level

Minimum level of protection required for any persons working on a private road or to be used in conjunction with a higher classed garment. Must incorporate a minimum of 0.14m² of background material and 0.10m² of retro-reflective material. (2 metres of 5cm wide reflective tape)

EN 343 - Protective Clothing, Protection Against Rain

EN 343 EN 343 is the harmonised European standard that applies to garments worn in adverse weather conditions. It specifies the characteristics of protective clothing against the influence of foul weather, wind and cool above -5°C. The standard provides for two performance parameters: X = Waterproofness (4 levels) Y = Breathable properties (4 levels)

EN 342 - Protective Clothing - Ensembles and Garments for Protection Against Cold

EN 342 EN 342 is the harmonised European standard that specifies requirements and test methods for performance of clothing ensembles (ie. two piece suits or coveralls) and of single garments for protection against cold environment.

EN 14058 - Protective Clothing- Garments for Protection against Cool Environments

This standard specifies requirements and test methods for the performance of single garments for protection against cooling of the body in cool environments. Cool environments are as a result of a combination of humidity and wind at temperatures of -5°C and above.

At moderate low temperatures garments against local body cooling are not only used for outdoor activities but can be used for indoor activities. In these cases garments often do not need to be made of watertight or air impermeable materials. Therefore, these requirements are optional for this standard.

The cornerstone of success is stringent quality control. Can you be sure the product you are wearing conforms to AS/NZS 4602.1?

A certificate from a test house guarantees that the garment or fabric sent to the test house has attained the AS/NZS 4602.1 standard. It is not a guarantee that the bulk production meets the standard. Therefore, it is necessary that every roll of fabric and retro-reflective tape is tested with highly specialised equipment which guarantees that all production meets the AS/NZS 1906.4 standard.

FABRIC TESTING

In the quality control laboratory the Minolta Spectrophotometer is used to check every roll of fabric. This guarantees that the fabric used is fully compliant to the AS/NZS 1906.4 standard.

This graph displays the CIE 1931 X, Y chromaticity diagram which defines a colour space for graphing colour. Specifications for the colour space and luminance (brightness) are provided in the AS/NZS 1906.4 standard. The colour space is divided into 2 main classes - yellow and orange-red, with further divisions for certain application

CLOSE-UP VIEW OF FLUORESCENT YELLOW

This graph shows an enlarged view of the yellow AS/NZ 1906.4 colour range. The colour co-ordinates marked on the graph are a reading from our fluorescent yellow fabric. This reading is taken using the Minolta Spectrophotometer.

PORTWEST[®] X-BACK RANGE

CROSS BACK REFLECTIVE TAPE FOR MAXIMUM VISIBILITY

Meeting the stringent requirements in both design and construction, this collection of styles is fully compliant with the latest NSW Rail standard. The NSW Rail standard sets out the minimum specification for high visibility clothing worn in the Rail Industry. These styles are also certified to the AS 4602.1 standard which specifies the visual requirements for high visibility safety garments.

TTMC-W17 RANGE

The New Zealand Transport Agency (NZTA) has a code of practice which specifies the standard of safety garment that a worker must wear while working in or close to hazardous traffic areas. This safety standard is called TTMC-W17.

The main standard guidelines are as follows:

- All garments align to AS 4602.1:2011 Amendment No. 2.
- The area of high visibility background material for each design meets the requirements of AS 4602.1:2011 High Visibility Safety Standard.
- Compliant styles have a specific belt and braces configuration of 50mm retro-reflective tape.
- The vertical measurement for the position of the waist hoop is taken from the highest shoulder point and is positioned at 53cm +/- 2.
- The overall front length of vests and shirts does not exceed 71cm and the back hem drop extends another 15cm +/- 0.5.
- Any buttons, studs or similar closure devices that are placed on compliant material must be concealed or match the colour of the garment.
- There are no breaks permitted on the waist hoop except for a 25 mm front opening break.
- All garments display permanent labels that state TTMC-W17 standard.

FLAME RESISTANT

**INNOVATIVE
FABRICS OFFER
MAXIMUM
PROTECTION**

K8154: Flash Jacket
PS55: Endurance Helmet
PS47: Endurance HV Clip-on
Ear Protector

This industry leading flame resistant range provides multi standard protection for hazardous environments. These state of the art products are the result of years of experience combined with advanced technology and market research. Commitment to the health, safety and comfort of the wearer can be seen in the wide range of products suitable for all climates and end uses.

This inherently flame resistant fabric offers luxurious comfort and is ideal for hot climates. The special viscose blend provides outstanding ARC protection rarely achieved on lightweight fabrics. Constructed using 65% viscose, 33% aramid, 2 % anti-static, **Portflame™** is available in 185g.

Bizflame® is a proprietary flame resistant finish which, when applied to fabric, gives excellent flame resistance. All of the Bizflame fabrics use the highest quality raw materials, ensuring the perfect balance of comfort and strength.

Bizweld®: 100% cotton fabric is completely flame resistant. All Bizweld garments offer excellent flame and molten splash protection for welding, foundries and allied industries.

Modacrylic fibres provide inherent flame resistance, excellent dimensional stability and high elastic properties which allow garments to retain their shape. High cotton content gives the fabric comfort, warmth and a soft handle. Carbon fibre woven into the fabric gives inherent anti static properties.

PrimeTech™ FR Fabric: is exclusive to Prime Mover offering powerful flame resistant protection in 100% cotton fabrics. PrimeTech FR clothing will keep the wearer cool and comfortable whilst offering outstanding protection against flame spread.

IEC 61482-2:2009

IEC 61482-2
ATPV or $E_{t50} = \text{xxx cal/cm}^2$
or
Class 1 or Class 2

OR

IEC 61482-2
ATPV or $E_{t50} = \text{xxx cal/cm}^2$
and
Class 1 or Class 2

This standard specifies requirements and test methods applicable to materials and garments for protective clothing against the thermal effects of an electric arc event. An electric arc is a continuous electric discharge of high current between conductors generating very bright light and intensive heat. Two international test methods have been developed to provide information on the resistance of clothing to the thermal effects of electric arcs. Each method gives different information. To comply with the standard either or both tests must be carried out.

Box Test Method IEC 61482-1-2

The fabric/garment is exposed to an electric arc confined in a specific box with a specific electrode arrangement for 0.5 seconds. Class 1 is to a current of 4kA arc, Class 2 is to a current of 7 kA arc. Test conditions for

Class 1 & 2 try to stimulate typical exposure conditions for a short circuit current of 4kA and 7kA respectively.

Open Arc Method IEC 61482-1-1.

This test method aims to establish the ATPV (Arc Thermal Performance Value) or Ebt (Energy Breakopen Threshold) of a fabric. The ATPV is the amount of energy required to cause a 2nd degree burn through the material prior to break-open (50% probability). The Ebt is the amount of energy where the material breaks-open (50% probability). This is normally the upper thermal limit of the fabric where the fibres are damaged and the material loses mechanical strength. Both ATPV and Ebt are expressed in calories per cm2. EN 61482-1-1 tests the fabric with an 8kA arc for various incident durations. Workers are assumed to be safe if the arc rating of

their clothes exceeds the electric arc incident energy calculated in the worst case scenario of a risk assessment. Garments can be layered to achieve an overall ATPV or Ebt Rating. For example a thermal layer may achieve an Ebt of 4.3 Cal/m2, and an outer coverall may achieve an ATPV of 13.6Cal/cm2. However the combination ATPV/Ebt ratings will be greater than the sum of the two single layers, as the air gap between the two layers affords the wearer additional protection. Another parameter measured during the open arc test is the HAF value (Heat Attenuation Factor) - this describes the amount of heat blocked by the fabric.

ASTM F1959/F1959M-14

FABRIC ONLY TEST. This test method is the same as outlined above under EN 61482-1-1. Pre treatment may vary.

ASTM® F1959/F1959M-12: 2013

Standard Test Method for Determining the ARC Rating of Materials for Clothing FABRIC ONLY TEST. This test method is the same as outlined under EN 61482-1-1. Pre treatment may vary.

* Note the term HRC has been replaced by ARC.

EN ISO 11612: 2015

The performance requirements set out in this international standard are applicable to garments, which could be worn for a wide range of end uses, where there is a need for clothing with limited flame spread properties and where the user can be exposed to radiant, convective or contact heat or molten metal splashes.

This test uses standard methods and conditions to predict the performance of

fabric/garments in the event of contact with heat or flames. Garment features such as seams, closures and logos must be tested as well as the fabric. Tests must be carried out on pre-treated components according to the manufacturers care label.

Specific testing is listed below:
Dimensional change
Limited flame spread (A1+A2)*
Convective heat (B) - 3 levels
Radiant heat (C) - 4 levels

Molten aluminium splash (D) - 3 levels
Molten iron splash (E) - 3 levels
Contact heat (F) - 3 levels (temperature 250 degrees Celsius)
Heat resistance at a temperature of 180 degrees Celsius.
Tensile strength (must meet a minimum of 300N)
Tear strength (must meet a minimum of 10N)
Bursting strength
Seam strength

Garment design requires that coverage must be provided from the neck to the wrists and to the ankles.

Optional testing includes water vapour resistance and manikin testing for overall burn prediction.

*This test must be carried out on fabric and seams.

EN ISO 11611: 2015

This international standard specifies minimum basic safety requirements and test methods for protective clothing for use in welding and allied processes (excluding hand protection). The international standard specifies two classes with specific performance requirements.

Class 1 is protection against less hazardous welding techniques and situations causing

lower levels of spatter and radiant heat.

Class 2 is protection against more hazardous welding techniques and situations causing higher levels of spatter and radiant heat.

The following is a summary of the testing required:

Tensile strength (must meet a minimum of 400 N)
Tear strength (must meet a minimum of 15N for class 1 and 20N for class 2)
Bursting strength
Seam strength
Dimensional change

Requirements of leather
Limited flame spread (A1+A2)*
Molten droplets
Heat transfer (radiation)
Electrical resistance

*This test must be carried out on fabric and seams.

EN ISO 14116: 2015

This standard specifies the performance requirements for the limited flame spread properties of materials, material assemblies and protective clothing in order to reduce the possibility of the clothing burning and thereby itself constituting a hazard. Additional requirements for clothing are also specified.

Protective clothing complying with this standard is intended to protect workers against occasional and brief contact with

small igniting flames in circumstances where there is no significant flame hazard and without the presence of another type of heat.

EN ISO 14116 has three different categories for flame spread, Index 1, 2 and 3 as detailed in the table below:

Note:
Index 1 garments should not be worn next to the skin. They must be worn over Index 2 or 3 garments.

Index 2 or 3 garments can be worn next to the skin.

Testing must be carried out on pre-treated components according to the manufacturers care label.

Testing required is as follows:
Limited flame spread
Tensile strength
Tear strength
Seam strength

| INDEX | REQUIREMENTS |
|-------|---|
| 1 | No flame spread |
| | No flaming debris |
| | No afterglow shall spread |
| 2 | No flame spread |
| | No flaming debris |
| | No afterglow shall spread |
| 3 | No hole shall form |
| | No flame spread |
| | No flaming debris |
| | No afterglow shall spread |
| | No hole shall form |
| | The afterflame must last no longer than 2 seconds |

EN 1149: 2018

Protective Clothing - Electrostatic Properties - Part 5. Material Performance and Design Requirements.

This is the harmonized European standard for protective clothing- protection against the danger caused by static electricity. This standard is not applicable for protection against mains voltages.

EN1149-1 Test method for surface conducting fabrics.

EN1149-3 Charge decay test method for all fabrics

EN1149-5 Performance requirements.

FLAME RESISTANT - EN STANDARDS

ATEX Directive

The ATEX Directive defines what equipment is permitted in an environment where an explosive atmosphere may exist. Portwest recommends using garments certified to EN 1149 for added protection in an ATEX environment. Portwest garments have not been assessed under the ATEX directive which currently excludes PPE.

EN 13034: 2009

Performance requirements for chemical protective clothing offering limited protective performance against liquid chemicals (Type 6 and Type PB [6] equipment). This standard specifies the minimum requirements for limited use and re-usable limited performance chemical protective clothing. Limited performance chemical protective clothing is intended for use in cases of a potential exposure to a light spray, liquid aerosols or low pressure, low volume splashes, against which a complete liquid permeation barrier (at a molecular level) is not required.

The standard covers both chemical protective suits (Type 6) and partial body protection (Type PB[6]).

Type 6 suits are tested using a mist or fine spray of water with a dye added to aid the assessment of leakage. The test subject wears an absorbent suit underneath the one to be tested, which absorbs any leaks and is stained by the dye. Success or failure is determined by measuring the total area of any stains on three suits and comparing this with the requirement. A range of other tests is specified, including resistance to

abrasion, tear strength, tensile strength, resistance to puncture, resistance to ignition, resistance to penetration by liquid chemicals and seam strength. In the test for liquid chemical repellency and resistance to penetration by liquid chemicals, a bank of four test chemicals is given in the standard although the requirement is that the suit material demonstrates adequate repellency and resistance to penetration against just one chemical from this list

EN 343: 2003

EN 343 is the harmonised European standard that applies to garments worn in adverse weather conditions. It specifies the characteristics of protective clothing against the influence of foul weather, wind and cool above -5°C. The standard provides for two performance parameters:

X = Waterproofness (4 levels)
Y = Breathable properties (4 levels)

AMERICAN STANDARDS

NFPA® 2112: 2018

This standard specifies the minimum performance requirements and test methods for flame resistant fabric and components and the design and certification requirements for garments for use in areas at risk from flash fires. Flame resistant fabrics must pass a comprehensive list of thermal tests, including the following:

-ASTM F2700 – Heat Transfer Performance

(HTP) Test

This test is a measure of the unsteady state heat transfer properties of garment materials.

-ASTM D6413 – Vertical Flammability (Flame Resistance) Test

This test is used to determine how easily fabrics ignite and continue to burn once ignited.

-Thermal Shrinkage Resistance Test
This test measures a fabrics resistance to shrinkage when exposed to heat.

-Heat Resistance Test
This test measures how fabrics and components react to the high heat that could occur during a flash fire.

-ASTM F1930-11 – Thermal Manikin Test
This test provides an overall evaluation of how the fabric performs in a standardized overall design after three-second thermal exposure.

-FTMS 191A – Thread melting resistance
Thread used in flame resistant garments must withstand temperatures of up to 500°F.

NFPA® 70E: 2015

This standard addresses electrical safety-related work practices for employee workplaces and requires employees working on or near energized parts and equipment to wear flame resistant clothing that meets the requirements of ASTM F1506

The NFPA 70E standard provides table 130.7(C)(16) as a guideline for the selection of protective apparel. This table lists the requirements for PPE based on arc flash PPE categories 1 through 4. This clothing and equipment shall be used when working within the arc flash boundary.

The table ranges from ARC 1 (which is low risk) up to ARC 4 (which is high risk and requires FR clothing with a minimum arc rating of 40). The higher the ARC rating value, the greater the protection.

ASTM F1959/F1959M-12 is the test method for determining the ARC rating of materials for clothing. This method is the same as outlined under IEC 61482-1-1, pre-treatment may vary.

| Hazard / Risk Category | Clothing description | Required minimum Arc rating of PPE/ cal/cm2 |
|------------------------|--|---|
| 1 ARC | 1 ARC: Arc rated FR Shirt and FR pants or FR Coverall | 4 |
| 2 ARC | 2 ARC: Arc rated FR Shirt and FR pants or FR Coverall | 8 |
| 3 ARC | 3 ARC: Arc rated FR Shirt and FR pants or FR Coverall, and arc flash suit selected so that the system arc rating meets the required minimum 25 | 25 |
| 4 ARC | 4 ARC: Arc rated FR Shirt and FR pants or FR Coverall and arc flash suit selected so that the system arc rating meets the required minimum 40 | 40 |

LAUNDERING OF FR FABRICS

Washing / Drying Procedure:

Pretreatment: If stains are difficult to remove, they can be treated before putting into the washing machine with a liquid detergent applied directly to stains and lightly rubbed. Heavier and stubborn stains should be pretreated with a commercial stain removal product at the earliest opportunity and sufficient time allowed for the pretreatment to penetrate and loosen the stain. Never use chlorine bleach or washing detergents containing bleach as these will reduce the flame resistance properties of the fabric. Fabric softeners, starches and other laundry additives are not recommended as they can mask the flame resistance performance and may also act as a fuel in case of combustion.

Washing:

Always wash contaminated workwear separately, do not mix with non workwear. Flame Resistant fabric can usually be washed at high temperatures however it is the components (ie. the reflective tape, badging, etc.) on a finished garment that dictates the maximum washing temperature that the garment can be washed at. Always follow the washing temperature on the garment label. Always wash and dry garments inside out to minimize surface abrasion and help maintain the surface appearance of the fabric. Zips should be closed during washing.

Load Size:

To ensure a more efficient, cleaner wash, avoid overloading the machine so the garments can move freely through the wash and rinse cycles.

Drying:

Tumble drying is not usually recommended as the temperature used is often too high and can cause garment shrinkage. It is vital that cotton or cotton mix garments are not over dried. Over drying is the main cause of excessive garment shrinkage. Do not hang in direct sunlight. This can cause fading.

The flame resistant finish is retained for the normal life cycle of the garment provided that the care instructions are adhered to.

RAIN WEAR

**RAINWEAR TO SURPASS
INDUSTRY EXPECTATIONS**

S601 - Portwest X3 Reflective Jacket
A722 - Anti Impact Cut Resistant Glove
B028 - Rechargeable Twin LED Beanie

PORTWEST rainwear is engineered with exceptional fabrics and designs, allowing these garments to transition between work and leisure. The best quality materials and high technology construction techniques are used throughout, guaranteeing the ultimate in all-weather protection. Tested to withstand the rigours of everyday wear, each garment has been designed and manufactured with care to ensure total satisfaction wear after wear.

Engineered with exceptional fabric and designs, the new **Portwest X3™** rainwear collection allows for optimal outdoor performance. Designed with a modern slim cut, each style offers multiple performance enhancing features. The highly waterproof and breathable fabrics used in this collection offer maximum protection against harsh weather conditions.

The **PORTWEST PWR™** collection is constructed from Portwest Extreme, a premium high performance waterproof and breathable fabric. Using state-of-the-art technology, the base fabric has been engineered to provide a technical barrier against the elements. This provides the maximum waterproof, breathable and windproof protection, which far exceed the current highest requirements.

Technical and innovative, the **TK2™** rainwear collection is engineered for maximum waterproof, windproof and breathable performance. Designed to be worn in adverse weather conditions, the collection incorporates clever styling with shaped panels for a comfortable and generous fit. Additionally this sophisticated collection is ideal for overbranding.

Texpel™ Splash is an extremely water resistant fabric finish which ensures water beads up and rolls off the fabric surface. This premium finish also repels dirt and helps prevent stains to keep your garment looking cleaner for longer.

Texpel™ Micro is a unique technology which inhibits the spread and growth of harmful microbes such as bacteria, fungi, spores and viruses. This permanent treatment has been independently tested and proven to provide 99.9% of antimicrobial properties even after 50 washes.

OUTDOOR PERFORMANCE RAINWEAR

Engineered with exceptional fabric and designs, the new Portwest X3™ rainwear collection allows for optimal outdoor performance. Designed with a modern slim cut, each style offers multiple performance enhancing features. The highly waterproof and breathable fabrics used in this collection offer maximum protection against harsh weather conditions.

Constructed using innovative carbon fibre technology, this heated jacket features three panels on critical points of the body. Each jacket includes a 10,000MA USB rechargeable battery that powers the heat technology (3-4 hours charging required). The built in controls allow the wearer to switch between three settings of heat: high, medium, low. The heated panels will give temperatures between 25-45C and can last up to 10 hours, depending on setting.

WORK WEAR

OVER 100 YEARS
OF WORKWEAR
INNOVATION

S547 - Ultrasonic Heated Tunnel Jacket
T602 - PW3 Holster Work Pants
FC31 - Bunbury Safety Boot
AP02 - Thermo Pro Ultra

The **PORTWEST** Workwear Collection offers a range of designs and features suitable for many end uses. The best quality fabrics and construction techniques are used, guaranteeing comfort and safety. Tested to withstand the rigours of everyday wear, each garment has been carefully designed and manufactured to ensure optimum quality at the best price.

Kingsmill™ Cotton Stretch is a premium cotton stretch fabric. This twill weave blend of 98% cotton and 2% elastane provides the ultimate in comfort and flexibility. The high cotton content gives an ultra soft handle, and the added elastane delivers ease of movement. This fabric has a UPF rating of 50+ to block 98% of UV rays.

Portwest cutting edge **Kingsmill™ Polyester Stretch** is a four-way stretch fabric made from 93% polyester, 7% elastane 270g. This blend provides ease of movement and effortless comfort in active use. The fabric delivers technical superiority with high breathability, moisture wicking and fast drying properties.

Portwest's innovative two-way **Kingsmill™ Polycotton Stretch** fabric is constructed from 65% polyester, 35% cotton. This premium workwear fabric offers excellent abrasion and tear resistant properties whilst the mechanical stretch function ensures full ease of movement for the wearer. A UPF rating of 50+ on this fabric blocks 98% of the UV rays.

Constructed from 65% Polyester, 35% Cotton, **Kingsmill™** fabric guarantees high performance and maximum comfort. The yarns are all ring spun with long staple combed cotton providing a smooth handle and excellent pilling resistance. The material is fully pre-shrunk and has superior dye retention. A UPF rating of 50+ will block 98% of UV rays.

QUALITY FABRICS ENGINEERED FOR ENDURANCE

ACTIVE **STREET** WORKWEAR

Portwest KX3™ is a superior line of trend-led apparel combining quality construction to the highest standards and technical fabrics. Key characteristics within this collection include abrasion resistance, moisture management and stretch fabrics for sustained agility and effortless movement. All KX3 garments have been designed to fully complement each other to allow a personal layering system to be built. A perfect solution for modern workwear.

A PREMIUM RANGE FOR
THE MODERN WORKER

CV04
186

PORTWEST® COOLING 360°

The Latest in Cooling Technology

This innovative range offers a comprehensive selection of products to help minimise the risk of heat stress and UV rays. Outdoor workers in construction, agriculture, mining, oil and gas and other industries frequently find themselves working in temperatures up to and over 40°C/100°F. This Cooling range is ideal for use in these conditions.

FABRIC INFORMATION

Portwest evaporative cooling products are constructed from Cooling 360° Fabric Technology which uses a unique polymer chemistry. Simply activate by soaking in water creating a chemical reaction within the fabric which enables the garments to act like a sponge; retaining water, keeping the body cool in hot weather conditions.

Step 1

SOAK IN COOL
WATER FOR
1-2 MINUTES

Step 2

SQUEEZE
OUT EXCESS
WATER

Step 3

KEEP COOL
FOR UP TO 8
HOURS

THE GARMENT WILL REMAIN HYDRATED FOR SEVERAL HOURS
TO REACTIVATE REPEAT STEPS 1, 2 AND 3

# CHEFS WEAR

THE PROFESSIONALS  
CHOICE

*This exclusive range of Chefswear has been designed especially for busy catering professionals. Using high quality, hardwearing fabrics and advanced construction techniques, each style has been tested to withstand the rigours of everyday wear and tear. Practical and stylish with an array of designs from classic to modern, this range has been designed to keep the wearer cool and comfortable in hot working environments.*

**Kingsmill™** Cotton is fully pre shrunk and has excellent dye retention properties. The long staple fibres used in the construction process provide strength, pilling resistance and a quality finish.

Constructed from 65% Polyester, 35% Cotton, **Kingsmill™** fabric guarantees high performance and maximum comfort. The material is fully pre-shrunk, has superior dye retention and all the features you would expect from a modern workwear fabric.

**MeshAir™ Pro** is a double layer 100% polyester aerated mesh designed to improve airflow and draw moisture away from the skin, leaving the wearer cool, dry and comfortable. The MeshAir Pro 140g fabric features special hollow fibres that enhance air circulation to help regulate body temperature, while the double layer construction offers improved breathability and protection.

Our exclusive range of lightweight 100% cotton chefs jackets feature **MeshAir™** aerated underarm mesh panels. Constructed from 100% polyester, MeshAir aerated mesh 110g helps improve airflow and wicks moisture away from the skin. Special hollow polyester fibres improve air circulation, helping to keep you cool, dry and comfortable.

**Texpel™** SOS, Splash, Oil and Stain is a premium fabric finish which repels oil and liquids, causing them to bead up and roll off the fabric surface. The finish also helps release stains in the washing process, keeping garments looking cleaner for longer.

# STANDARDS

## AS 2210.3:2019

This Australian and New Zealand standard specifies basic and additional (optional) requirements for safety footwear used for general purposes. It includes, for example, mechanical risks, slip resistance, thermal risks, ergonomic behaviour. The classification system used to identify the protection provided by the footwear is listed:

| Category   | Additional requirements                                                                                                                                                                                                                                                       |
|------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>SB</b>  | The presence of a safety toecap providing protection against impact injury to the toes caused by falling objects. Level of protection provided is 200 joules. Prevention of compression injury to the toes if trapped under a heavy object. Level of this protection is 15kN. |
| <b>SBP</b> | As SB standard plus penetration resistance.                                                                                                                                                                                                                                   |
| <b>S1</b>  | As SB standard plus closed seat region, antistatic properties, resistance to fuel oil and energy absorption of seat region.                                                                                                                                                   |
| <b>S1P</b> | As S1 standard plus penetration resistance.                                                                                                                                                                                                                                   |
| <b>S2</b>  | As S1 standard plus water penetration and water absorption resistance.                                                                                                                                                                                                        |
| <b>S3</b>  | As S2 standard plus cleated outsole and penetration resistance.                                                                                                                                                                                                               |
| <b>S4</b>  | 200 joule toecap protection. All rubber or all polymeric footwear with antistatic properties. Resistance to fuel oil, energy absorption of seat region and closed seat region.                                                                                                |
| <b>S5</b>  | As S4 standard plus cleated outsole and penetration resistance.                                                                                                                                                                                                               |

## EN ISO 20345:2011

This international standard specifies basic and additional (optional) requirements for safety footwear used for general purposes. It includes, for example, mechanical risks, slip resistance, thermal risks, ergonomic behaviour. The toecap protects the wearer's toes against risk of injury from falling objects and crushing when worn in work environments where potential hazards may occur. The midsole protects against the foot being pierced by underfoot objects.

Table of additional requirements for special applications with appropriate symbols for marking.

| Requirement                                                          | Symbols    |
|----------------------------------------------------------------------|------------|
| Penetration resistance                                               | <b>P</b>   |
| Electrical properties: Antistatic footwear                           | <b>A</b>   |
| Resistance to inimical environments: Cold insulation of sole complex | <b>CI</b>  |
| Energy absorption of seat region                                     | <b>E</b>   |
| Water Resistant                                                      | <b>WR</b>  |
| Metatarsal protection                                                | <b>M</b>   |
| Water penetration and absorption                                     | <b>WRU</b> |
| Resistance to hot contact                                            | <b>HRO</b> |
| Resistance to fuel oil                                               | <b>FO</b>  |

All footwear is tested to AS/NZS 2210.3:2009 (Thread strengths)

# SUSTAINABILITY

WORKING TOWARDS THE UNITED NATIONS  
SUSTAINABLE DEVELOPMENT GOALS

## Partnerships for Goals

Our ethos is to build strong global partnerships and cooperation with industry test houses and associations.

**PORTWEST** products are rigorously tested and certified by accredited test houses and notified bodies including:

**PORTWEST** are members of many global industry leading associations. We are proud members of:

PARTNERSHIPS  
FOR GOALS

## Responsible Consumption & Production

We are continually striving to implement low-carbon and green initiatives, by increasing resource efficiency and promoting a sustainable lifestyle.

Many garments in the Portwest range are made from recycled polyester. **PORTWEST** use 35 Million 1/2 Litre recycled bottles to make Portwest garments every year.

**TYPICALLY IT TAKES 20 PET BOTTLES TO MAKE ONE JACKET**

**80% OF ALL PACKAGING IS RECYCLABLE**

RESPONSIBLE  
CONSUMPTION  
& PRODUCTION

## REAL PLANS - REAL PEOPLE

As Sustainability Coordinator, I am constantly looking for new ways to make Portwest product more environmentally friendly and reduce our carbon footprint. I closely follow new developments and innovations that could be adopted by PORTWEST to improve sustainability. Under my leadership, PORTWEST have recently began to adopt the United Nations Sustainable Development Goals which are a universal call to end poverty, protect the planet and improve the lives and prospects of everyone, everywhere. **Rebecca Lambert Design and Sustainability Manager**

### Decent Work & Economic Growth

Through strong economic growth, Portwest can drive progress and improve living standards and jobs for all.

#### WRAP

Portwest's fully owned factories are certified to the WRAP Gold Standard. WRAP is the world's largest, independent, factory-based compliance programme for responsible production in the sewn product sector.

#### SEDEX

Portwest is a member of Sedex, and our factories are audited using the Sedex Members Ethical Trade Audit (SMETA). SMETA is a social auditing framework that aims to support business practices across labour standards, universal rights, management systems and health and safety.

DECENT WORK & ECONOMIC GROWTH

Sedex

### Climate Action

It is PORTWEST's aim to respond meaningfully and take the necessary steps to address the ongoing threat of climate change.

#### ISO 14001 - ENVIRONMENTAL MANAGEMENT SYSTEMS

Portwest comply with ISO 14001 allowing the company to set up a fully integrated and pro-active Environmental Management System that will help in reducing the carbon footprint and better manage the impact of organisational activities on the environment.

To reduce our **environmental impact**, **sea freight** of goods in full containers is our preferred mode of transport.

**PORTWEST** will expand its current 750 acres holding of managed parkland as part of our goal to achieve carbon neutrality.
